

## In the future more people will be affected by natural hazards - estimated to 1.5 billion people within 2050

Figure 12: Exposure to cyclones and earthquakes in large cities in 2000 and 2050

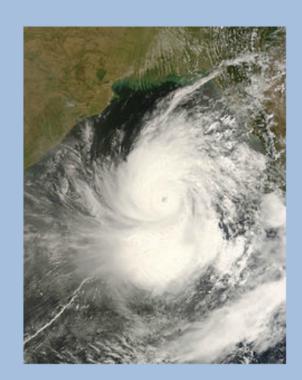

Note: Map produced by Brian Blankespoor, DECRG; see also World Bank (2010).

### GOAL: mitigate effects of climate change

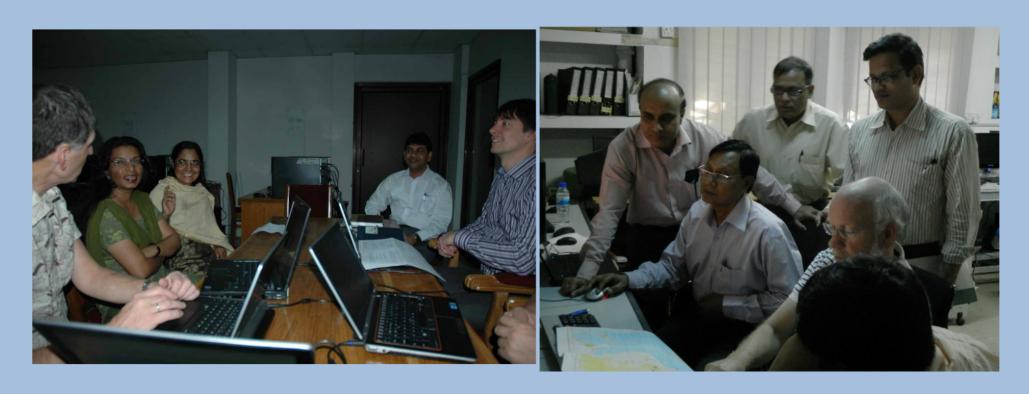

- Contribute to capacity building and product development
- Focus on early-warning & climate services
- Strengthen the social mission of the NMHS

# Challenges

- Little or no integration between obs and forecasting
  - Many data formats
- Black-boxes/commercial software
- No or little technical support (no IT department)
- · No systematic forecast verification
  - Large distances between us
  - Language & culture issues
  - Organizational structure

## Building the institution by building the people

Build trust & mutual respect for knowledge Listen & understand --> than propose

# Solutions

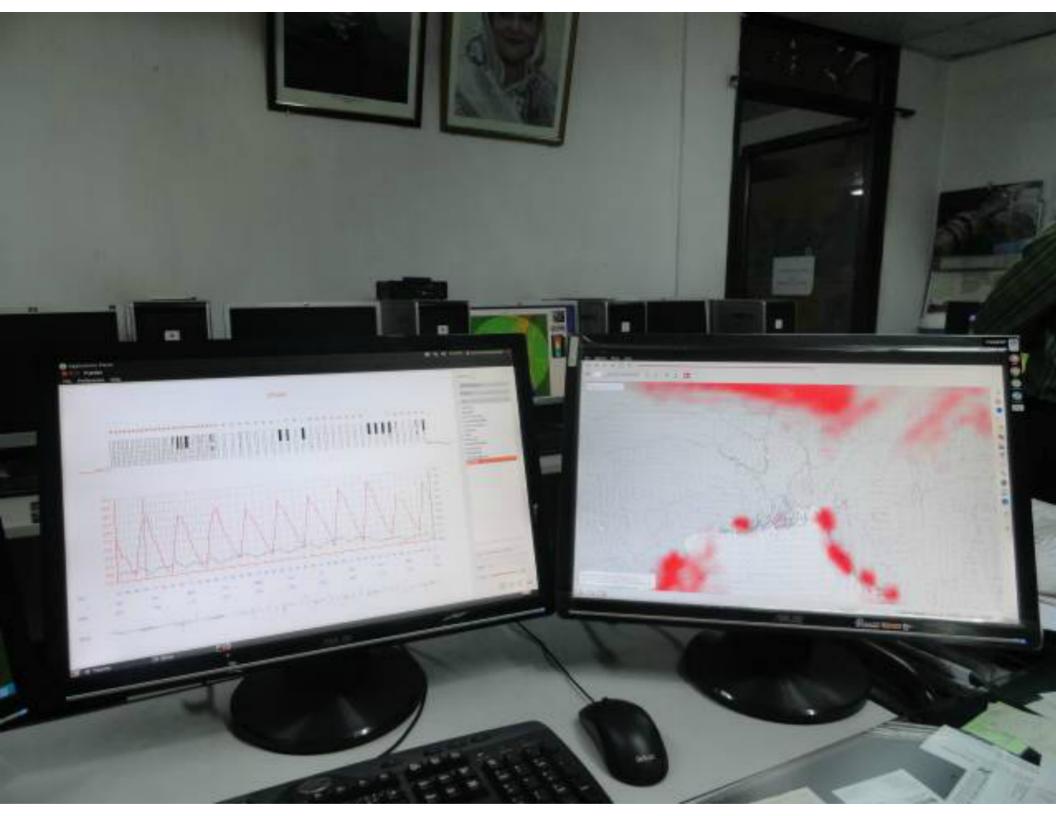

#### Early-warning operational services:

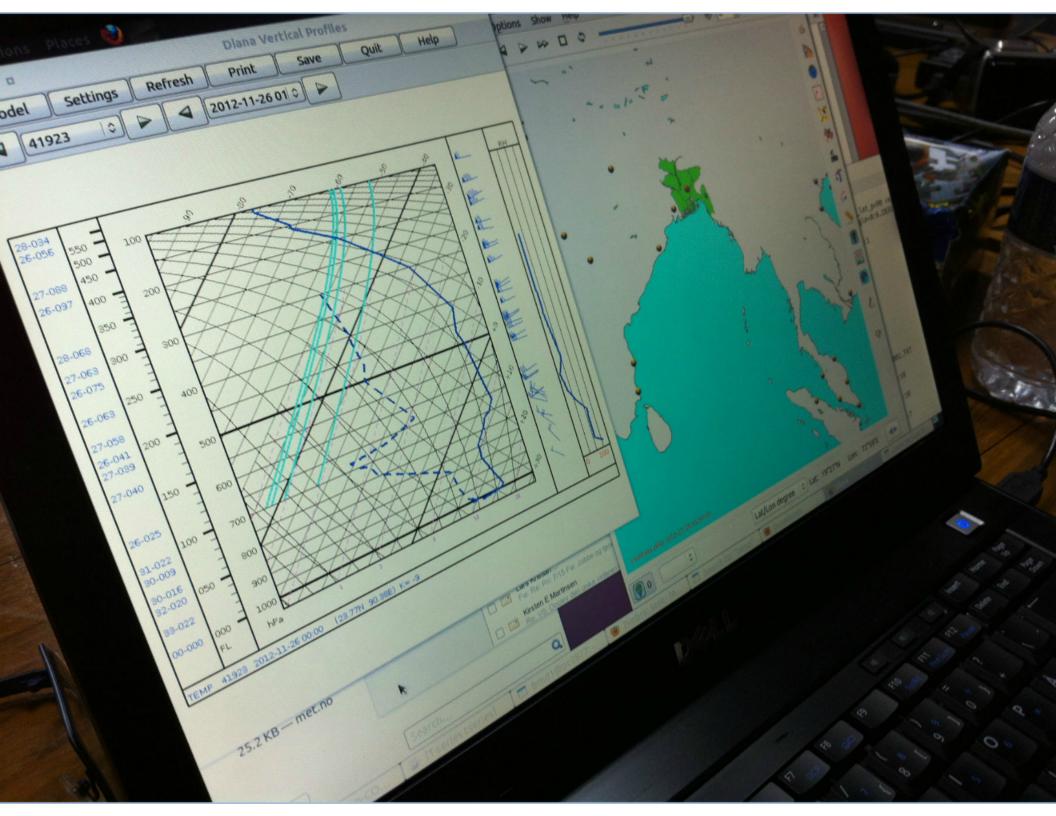

- · Implementation and use of a integrated forecasting tool (Diana)
- · Build experience in the use of NWP
- Forecast verification
- Ocean modeling (Vietnam)

#### Climate products and services:

- Digitization and homogenization of climate data
- · Climate product generation & R statistical tool
- · Assistance in establishing and using a climate database (portal)

### Results/Benefits

- Improve weather analysis and monitoring
- Improve decision making for forecasters
- Improve effeciency spend more time with users

"DMH are able to use and practice in Diana for 10-days forecasting and using in discussion every day now."

#### Asian Disaster Preparedness Center

- Support from several donors
- Aim: strengthen the ability for a country to mitigate the impact of natural hazards
- · Provides training and workshops in the region
- Collaborating with the capacity building projects in Myanmar and Vietnam. Plans for collaboration with Bangladesh
